

5.0 Detailed guidelines of purchase order response (ORDRSP Version 1 EDIFACT D 96B) usage within Volvo.

5.1 General.

This document describes Volvo's application of the EDIFACT message for purchase order response (ORDRSP) and its relations to purchase order (ORDERS) and order change (ORDCHG).

The specification offers a detailed description of those data elements which will be used including recommended code listings. Special attention to code listings is needed if transfer and transformation to ANSI X12 is done for the U.S. market. See, Cross listing below at appendix 3.

The basis of the application is the EDIFACT message entitled ORDRSP version D96B issued by UN in September 1996.

The frequency and scope of the ORDRSP message are specific for each company within Volvo.

Relations to other messages:

ORDRSP message has strong relations to the ORDERS message and ORDCHG message. An ORDRSP message must always be related to a previously issued ORDERS or ORDCHG message.

Message usage:

It is important in all communication that buyers and sellers prime references must be given. This to allow automatic processing in the order cycle, without manual intervention. That is also why free form text in a message is not recommended.

Message constraint:

It is important to understand that the message can only be used to confirm previously received ORDERS or ORDCHG messages. An additional facility is that the supplier can suggest substitutions with the message or indicate changes in delivery agreements.

Buyer to Seller	communication is done by using ORDRSP message can not be used from BUYER to SELLER.
Seller to Buyer	communication is done by using ORDRSP message for either strict confirmation of received ORDERS or ORDCHG message from buyer confirmation with full ORDERS or ORDCHG message content confirmation of ORDERS or ORDCHG message with proposals to changes.

5.2 The purpose and the basic function of the message.

The purpose of purchase order response is to respond on the following purchase orders or purchase order changes messages from the buyer.

- Order for parts to a Volvo production or aftermarket facility.
- Order for Tools and tooling..
- Order for Sample parts out of tools.
- Order for Non Automotive Parts(NAP) or Material, Repair and
- Operations (MRO),for goods and services.
- Order for Products from a Volvo manufacturer. (i.e. Vehicle, Engine...)

The message may contain the full information from an purchase order or a purchase order change message.

- Who is the buyer.
- Who is the seller.
- Payment terms
- Delivery conditions.
- Item number or description of goods.
- Quantity of goods.
- Where to deliver (consignee)
- When to deliver (if Stand Alone Order)
- Where to send Invoice.
- Add, delete or change proposals.

Code specifications:

- Codes that are to be used for the message are given either
 - directly listed in the message
 - referred to as a code list known by EDIFACT
 - referred to as a Volvo known code list (referenced in message file description as "See appendix 1")
 - referred to as a Volvo Company known code list (referenced in message file description as "See Trading partner agreement). (These codes are not found in this documentation.)

ANSI X12 relations:

Applications that are about to send files for conversion to corresponding ANSI X12 (855 or 865) message need to consider below cross listing. See appendix 3.
